

Helping You Stay Safe – Telehealth at Mascoma Community Health Center

Mascoma Community Health Center can now offer you a real-time office visit in the safety of your home using your computer, smartphone, ipad or regular phone. It is just like a real office visit with only a few limitations (for example, we can't take your temperature but you can do it for us). It is called Doxy.me and is simple as pie:

1. Call 523-4343 and we will schedule an appointment just like normal;
2. We send you an email confirming the appointment that contains the Doxy.me link and an easy to understand YouTube video;
3. At the time of your appointment you click on the link and are taken to an online 'Waiting Room' until,
4. Your provider brings you into the virtual 'Exam Room' for your visit.

This is a great way we can help you with all your health concerns while at the same time keeping everyone safe. If you are interested in checking out the technology go to <https://doxy.me/patients>

If you don't have a computer or smart-phone, and would just prefer speaking to your provider over the phone, don't worry, we can set up a Telehealth phone appointment for you just as easily.

Remember, your health is important to us and we want to be here for you during these challenging times.

Sincerely,
The Staff at Mascoma Community Health Center
